

Vision Preparation Questions

Start with some foundational questions:

- What is my organization's purpose and vision? How does my area of the organization contribute to that purpose and vision?
- What are my organization's values and vision for company culture? How does my area of the organization contribute to that vision and those values?
- What are my organization's business ambitions? What influence will technology have on those ambitions? How does my area of the organization contribute to those ambitions?
- What economic objectives are part of my organization's strategy? How does my area of the organization contribute to those objectives?
- What methodologies, frameworks, or ways of working are preferred by my organization? E.g. Scrum, DevOps, BizDevOps, SAFe, LeSS, etc. How is my area of the organization implementing those?

Take stock of the current situation:

- What initiatives or projects are already running?
- What have you promised / committed?
- What are your priorities?
- What pain points do you currently have? And what pain points do you anticipate in the coming 1-3 years?

Consider what areas low-code/Mendix can have a positive impact:

- How can low-code positively impact each of the questions above? While Mendix and low-code may seem like a technology solution, don't underestimate the impact it can have on "soft" areas such as company culture, values, collaboration, and ways of working.
